

I am writing to request that you reject petition 04-160 requested by the Natioanal Association of broadcasters.

I have listened to the service that the satellite services are providing. It is far superior to anything heard from my local stations. The local stations provide one or two short traffic summaries and one weather broadcast per half hour. I find that too often I am either on the moddle of a traffic problem or have already gone through the problem before I hear it on my local station.

In my opinion, the satellite services are providing a much greater service to the public and it is not in the public interest to stop them from providing this service.

Respectfully
Walter Lukisch
